Summary

Backend and lead engineer with four years of experience designing and shipping scalable production systems serving 600k active users. Proven track record architecting high-performance APIs, leading engineering teams, and delivering zero-downtime deployments through feature flag systems. Strong foundation in Node.js, GraphQL, and event-driven architecture. Currently expanding expertise into generative AI application development.

Professional Experience

Lead Developer, *Dhan Technology Labs* 06/2025 – Present
Remote

- Architected an event-driven system that cut API response times ~85% (30s → under 4s), improving user retention through faster home-screen loads on login.
- Designed and rolled out a portal-wide feature-flag system enabling zero-downtime deployments to 600k users, with safe experimentation and gradual rollouts to specific customer segments — no production redeploys.
- Stopped recurring production crashes by fixing how our Node.js services handled errors, which eliminated outages and reduced 5xx errors.
- Drove cross-functional buy-in with stakeholders and clients, pitching architectural improvements and surfacing trade-offs to win approval for optimized system designs.

Backend Developer, *Dhan Technology Labs* 09/2022 – 06/2025

- Customized an existing Node-RED plugin to support a bespoke use case with no off-the-shelf solution, enabling rapid workflow automation within six months.
- Integrated application performance monitoring for GraphQL servers, surfacing real-time metrics in Kibana dashboards to identify and resolve critical API bottlenecks and improve throughput.

Cloud DevOps Associate, *Primesoft IP Solutions* 01/2022 – 09/2022
Hyderabad

- Responsible for monitoring and trouble shooting IAAS and PAAS services hosted on microsoft azure cloud platform.
- Maintaining tools and frameworks that support deployment automation, health checks of applications, and patching activities.
- Analyze logs to support and troubleshoot application and infrastructure issues in both production and non-production environments.

Projects

Digi Log, 08/2026 – 09/2026

Offline personal finance app for Android · React, Dexie (IndexedDB), Capacitor

- Built a local-first money tracker that runs fully on-device, with no account, server or SMS permission, and shipped it as an Android app with Capacitor.
- Designed a "usable balance" model that auto-deducts EMIs, rent and SIPs once salary lands, alongside savings pots, credit-card bill tracking, and borrowed/lent ledgers.

- Shipped 6 releases in 3 days through a GitHub Actions CI pipeline with Vitest tests, reaching 50+ downloads.

Network Hospital Finder ,
Cashless hospital and insurer news finder · TypeScript, Vite, GitHub Actions

- Built a free web tool that links users to the official cashless-hospital locators of 12 major Indian health insurers, with IRDAI details and complaint paths.
- Automated weekly news refreshes through GitHub Actions, which opens an issue on its own when a job fails.
- Chose a compliant data approach: linked to official sources instead of scraping, and added validation guards (row-drop and pincode thresholds) to the data pipeline.

Skills

Languages:
Python(primary), Javascript, Typescript, NodeJS

API architecture
REST, GraphQL

Cloud
Azure

AI tools
Claude, Github Copilot, Antigravity

Database
MongoDB, Postgres, Firebase, Redis(cache) MSSql

Certificates

AZ-900 : Microsoft Azure Fundamentals
Microsoft

Docker Essentials: A Developer Introduction
IBM

Introduction to Cybersecurity
Cisco

Certificate of completion: Claude Platform 101
Anthropic

Certificate of completion: Claude code 101
Anthropic

Certificate of completion: Claude 101
